

FASTWEB launches *Tutoricabile*

**For the first time
Internet at 6 or 20 Mbit/s and telephone
on a prepaid basis with no access charge**

Milan, May 16, 2006 – FASTWEB launched today *Tutoricabile*, a new service that further enriches its offer for residential users. *Tutoricabile* is the first-ever rechargeable Internet and Telephone service targeting people who want to manage their telecommunications spending themselves without giving up the superior speed and quality of FASTWEB services.

Tutoricabile is intended for the new user segment of young couples, singles and anyone interested in fixed telephone and Internet services, who keep a close watch on their spending. The typical *Tutoricabile* user will be a person who spends little time at home and uses fixed TLC only for specific purposes. A simple, non-invasive solution, *Tutoricabile* meets the need for a practical, efficient and cost-effective service: there is no access fee and the package is self-installing.

So now, thanks to FASTWEB, access-free high-speed Internet and telephone are available on a pay-per-use basis, with an easy-to-install modem configured for Wi-Fi navigation, to which the PC and cordless phone connect on a wireless basis. Here's how:

To enjoy the traditional quality of FASTWEB telephony and connectivity on a **pay-per-use** basis –Internet at a certified* incoming rate of up to 6 Mbit/s and a transmission rate of 1 Mbit/s –*Tutoricabile* users have to purchase the prepaid cards, for 25, 50 or 100 Euro, from authorized dealers or directly on FASTWEB's commercial website. For people who already have a line installed and want to keep their number, the activation charge is 49 Euro and includes a **cordless** phone and **modem** on a free loan basis; customers who require a new FASTWEB number pay an activation fee of 148 Euro. The modem is already configured for Wi-Fi navigation (the *MegaInternet senza fili* option has a one-time charge of 49 Euro) and comes with a cordless phone dock.

Tutoricabile, the latest addition to FASTWEB's service portfolio, is an innovative off-the-shelf offer. This appealing and practical commercial synthesis of the activities of FASTWEB Labs delivers the flexibility of the network and IP technology in a simple, easy-to-use solution, complete with stylish accessories.

Costs:

Pay-per-use Internet: 1.50 Euro per hour

Telephone: 0.15 Euro on response – 0.15 Euro per minute

With the *Super ADSL* option (one-time charge of 80 Euro) users can boost their **Internet incoming access rate to 20 Mbit/s***.

FASTWEB more and more for everyone

The FASTWEB range of residential solutions, available today for about 10 million families in more than 130 Italian metropolitan areas, is designed to deliver the best flexibility and quality on the market today for any communication requirement.

The classic FASTWEB **Triple Play** offer is for families who want to cable their homes with telephone services, up to 5 high-speed Internet access points and on-demand television (FASTWEB's website illustrates the broad selection of flat-rate and pay-per-use Voice and Internet options together with details about the TV offer and each month's exciting special offers).

For singles or young couples, FASTWEB's **Dual Play** offers provide access for one telephone line and one Internet point with all the quality of FASTWEB connectivity. Specifically:

- FASTWEB **Easy** for discerning consumers and high spenders who want a flat-rate broadband Internet service with the voice line as an option on a prepaid basis and a FASTWEB handset to connect to the network. No access charge.
- FASTWEB **Tuttoricabile** to give low spenders high-speed Internet and telephone on a prepaid basis with no access charge.
- FASTWEB **Light** is the **Single Play** offer for people who want to try FASTWEB Internet but keep their Telecom Italia voice subscription.

FASTWEB **Internet** delivers the highest access rates available on the Italian market today, **on all flat-rate and pay-per-use packages without distinction**: up to 10 Mbit/s on fiber and **certified* 6 Mbit/s*** for ADSL, with options to boost access rates **up to 20 Mbit/s*** with ADSL2+ technology and upgrade transmission speed to 1 Mbit/s.

** Certified rate because FASTWEB guarantees network access and checks twisted-pair capacity to support continuous 6 Mbit/s, or up to 20 Mbit/s with the Super ADSL option, by running a 72-hour test during activation. If the test is negative, connection is implemented at the highest supported rate. Actual Internet navigation speed may be affected by external factors that are independent of the FASTWEB network.*
